

Organization of Itecons

Itecons focuses its activity in the area of research and technology transfer in Construction Sciences, with an emphasis on issues of Energy, Environment and Sustainability.

Specifically, Itecons is organized into three Hubs of knowledge:

- Construction Sciences;
- Knowledge Transfer for Sustainable Construction Technologies;
- Energy for Sustainability.

In operational terms, the activities carried out at Itecons are divided in five major units:

- Technical Assessment;
- Research and Technological Development;
- Consultancy;
- Training and Events;
- Measurement and Testing.

The five units are common to Itecons' centres of activity and are supported across the board by the staff bodies of Management Support Processes:

- Administrative and Financial Management;
- Public Relations and Marketing;
- Quality, Safety and Environmental Management;
- Facilities and Information Technology Management.

In addition to this support, four of these major units also rely on the expertise of the Technical and Scientific Committee made up of members of Fundação para a Ciência e Tecnologia (FCT), accredited R&D institutions which have been invited by the President of the Board of Directors and acknowledged by the members of the Board.
